With An Ethanol Fireplace, The Possibilities Are Endless!

For most people, a fireplace means one of two things. Either chopping wood for fuel and lighting it with a match, or flicking a switch and having their gas fireplace flare up. But what do people think of when they think of an [ethanol fireplace](#)? You can't help but think of all the possibilities. Without venting, or flues ethanol fireplaces can actually go almost anywhere in your home or yard.

What people seem to love is the flexibility of having a [free standing ethanol fireplace](#). With a typical fireplace, you have to design your room around the fireplace, because it cannot be moved. With a free standing ethanol fireplace, you can move it around the room as you would with any other piece of furniture. This means as you redesign your home, your options are never limited!

Another option people love is creating a two sided ethanol fireplace that divides a room. Similar in looks to two sided gas fireplaces, this open option allows you to have a modern and alluring ethanol fireplace in two rooms at the same time!

Another popular route people are going is placing the [wall mounted fireplaces](#) in areas that they typically have never seen a fireplace before. We are seeing an increase in the number of ethanol fireplaces installed in kitchens, bathrooms, and bedrooms.

Have you ever been relaxing in your home and thought about how nice it would be to have a fireplace by you? This is an opportunity for you to look at The Bio Flame's line up of ethanol fireplaces and see which model would look great in that space. There are very few limitations when installing an ethanol fireplace, so start imagining the possibilities!

We would love to work with you to find the perfect model to complete the vision you have! Feel free to [contact us](#) for more information.
